Re: TCI of NY – Expansion Project

To whom it may concern,

Bishop Beaudry Construction LLC recently completed the construction of our expansion to the process building of our recycling facility. The new facility is an approximately 38,000sf building consisting of an additional processing space, a completely enclosed loading dock, storage canopy and exterior upgrades including storm-water and asphalt paved logistic and storage space. Bishop Beaudry Construction was secured during design and was able to provide accurate and flexible budgeting and estimating throughout the pre-construction process. In addition, they assisted with the design team to finalize site design, electrical design and building design to ensure that the final design was functional and within budget.

During construction, Bishop Beaudry Construction's team consistently provided a team oriented atmosphere and consistent updates on schedule, budget and progress that allowed for the flexibility to complete the overall design as construction was underway. They always provided an open and honest process during pricing exercises as well as construction processes. It was apparent that they valued honest communication, their reputation and their relationship with all parties involved in the project.

In conclusion, it was a pleasure working with Bishop Beaudry Construction LLC and TCI of NY would highly recommend them for any construction project that may be considered.

Sincerely
